ISSUE FIXED

1. While giving certain privileges to a user you have to update it multiple time during the first time for it to function properly.

Example

- 1.Created a user-- in the general privileges didn't allow old refund and saved it-- tried a refund--validation happens
- 2.Then changed the privilege to allow refund--but while trying to make a refund without sale there is still the previous validation.
- 3.Will have to do this a few times repeatedly to make it work properly.

2. Same issue is found while trying auto revoke, manual revoke privileges for a user.
